Target Audience

For physicians and nurse experts who are actively engaged in the management of patients with, or at risk of, tuberculosis.

Format

The format for this conference will include lecture presentation and case scenario analysis with audience discussion and participation. There will be ample time for questions and answers.

Conference Goal

The goal of the conference is to enhance the expertise of providers to improve the prevention, treatment, and management of patients with TB.

Conference Objectives

Using highly interactive lectures, case studies and other types of learning exercises, participants will be able to: Describe current epidemiology of TB in the US and globally; identify TB and immunologic tools for diagnosing TB and demonstrate their application in the management of TB; implement CDC guidelines for treatment of LTBI; describe current laboratory methods for the detection, identification, genotyping and drug susceptibility testing of *M. tb*; discuss the role of a public health lab in the diagnosis and management of TB; identify and implement measures to eliminate transmission of *M. tb* in a medical facility; recognize the presentation of tuberculosis disease in various clinical settings; discuss antituberculosis drugs, including common side effects; and implement CDC guidelines for therapy of *M. tb*, MDR TB and XDR TB.
