

Who is at Risk of TB?

Annie Kizilbash, MD, MPH

Medical Director, Texas Center for Infectious Disease
Associate Professor of Medicine, The University of Texas at Tyler Health Science Center

Screening and Treating Tuberculosis Infection August 28, 2025 Tyler, Texas

Who is at Risk of TB?

Annie Kizilbash, MD, MPH August 28th, 2025 Screening and Treating Tuberculosis (TB) Infection

> Heartland National TB Center, Tyler, TX

Disclosures

- No conflict of interests
- No relevant financial relationships with any commercial companies pertaining to this educational activity

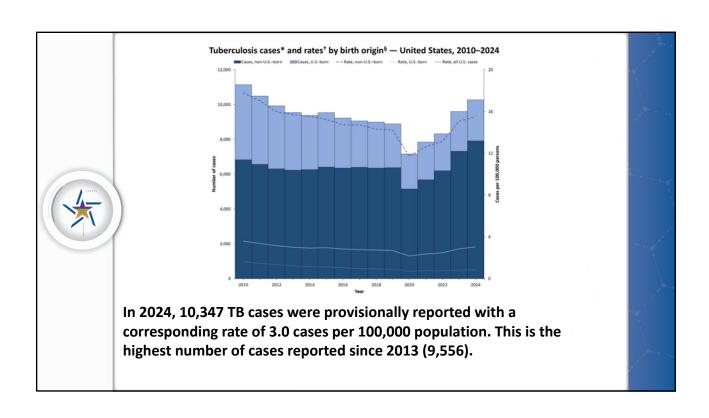

Objectives

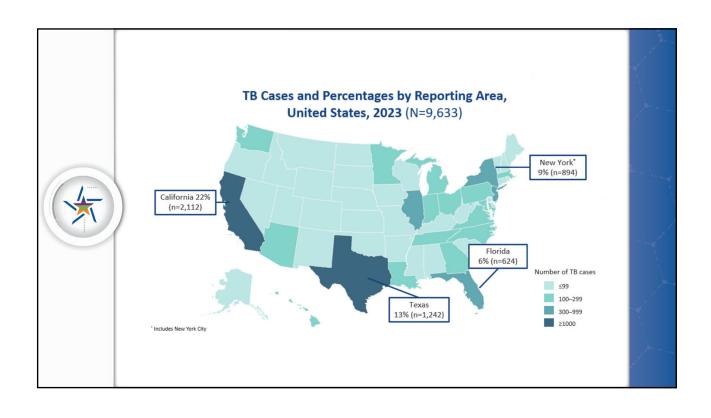

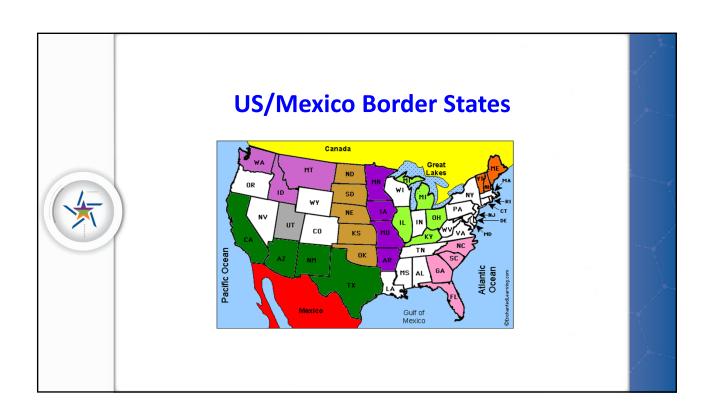

- 1. Describe the current epidemiology of TB in Texas, the United States and globally
- 2. List the groups of people who are more likely to be exposed to or infected with *Mycobacterium tuberculosis*
- 3. List risk factors for progression to TB disease if infected with *M. tuberculosis*

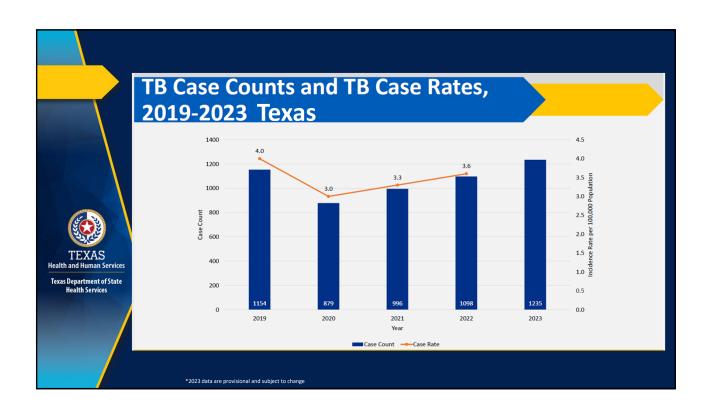

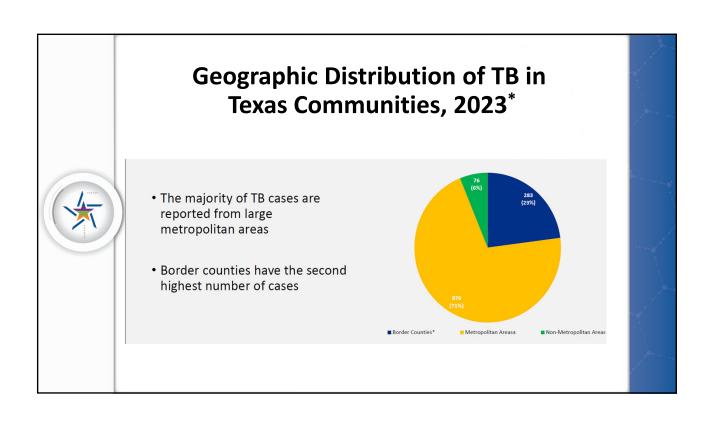

What is the Current Epidemiology of TB in the US and along the US/Mexico Border?

	Border	Non-Border
Alcohol Abuse	10%	10%
Non-Injection Drug Use	10%	9%
Injection Drug Use	1%	1%
Non-U.S. born	69%	61%
Homelessness	2%	4%
HIV	2%	5%
Diabetes	27%	20%
Resistant to Any Drugs	10%	6%

Who is more likely to be exposed or infected with *Mycobacterium* tuberculosis?

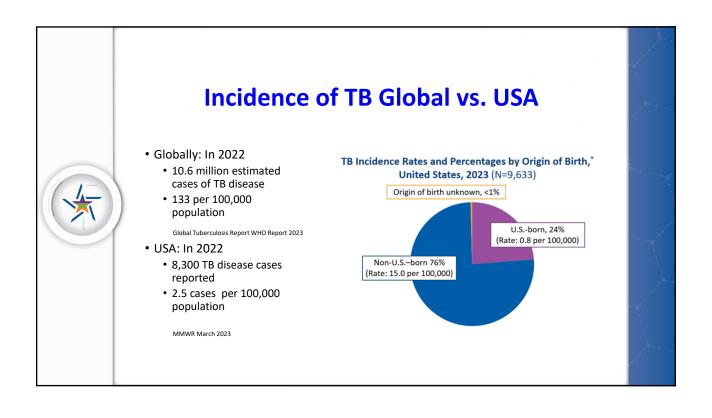

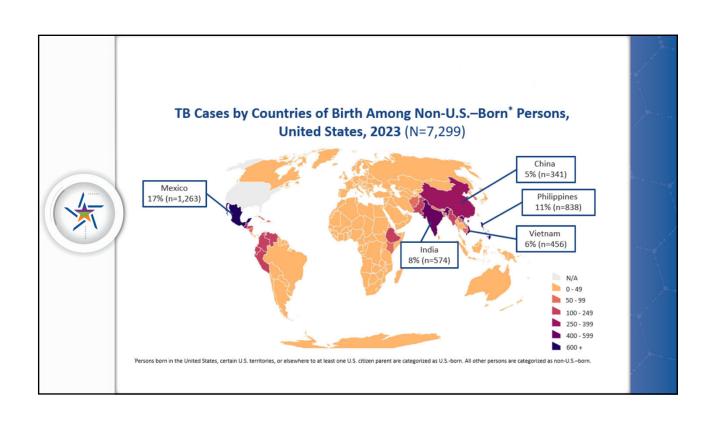

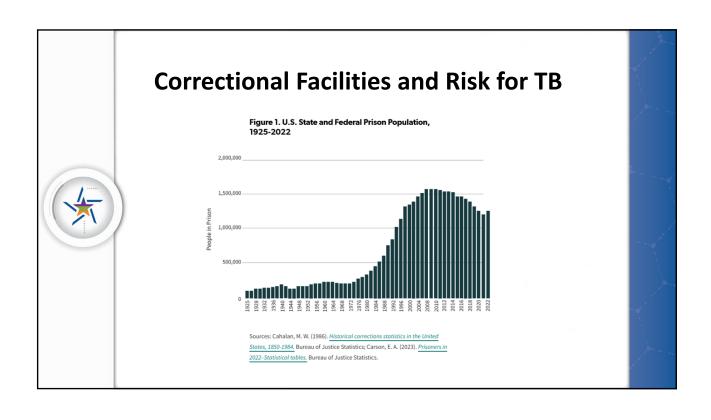

Who is more likely to be exposed to *M. tuberculosis*?

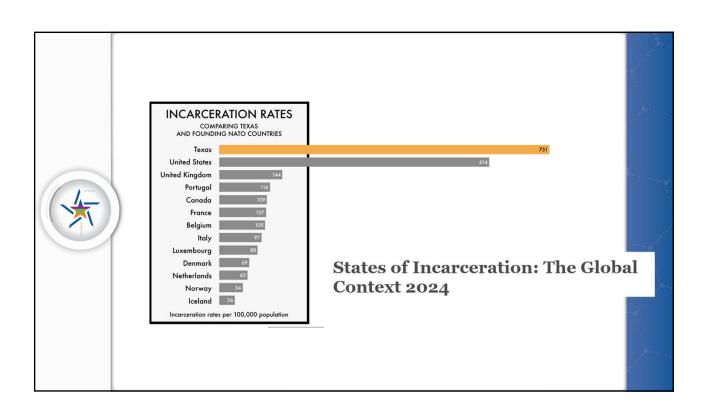

- Foreign born persons from countries with a high incidence of TB disease
- Residents and employees of high-risk congregate settings (e.g. correctional facilities, long term care facilities)
- Healthcare workers
- Contacts to persons with infectious TB disease
- Persons who spend time in shelters
- Persons who use illicit drugs

Correctional facilities and Risk for TB

- Prevalence of LTBI among inmates
 - 49 correctional facilities in 12 states, 198102 inmates, 17% TST positive
 - Treatment for latent TB in correctional facilities: a challenge for TB elimination; Loboto MN; Am J Prev Med. 2003; 24:249-53
- Correlation between length of incarceration and positive TST
 - 8% LTBI newly incarcerated, 5% increase with each year
- Active and latent tuberculosis in Brazilian correctional facilities: cross sectional study; Carbone; BMC Infectious Diseases 2015
 Substantially higher TB disease cases
- rates in correctional populations
 - E.g. New Jersey (1994) 91.2 cases per 100,000 (11 cases per 100,000 among all residents)

□ In El Salvador, 44% of tuberculosis cases occurred in prisons, the worst scenario. The country has the highest incarceration rate of the six Latin American nations studied. Photograph: Alex Peña/Getty Images

AT-A-GLANCE: CDC RECOMMENDATIONS FOR **CORRECTIONAL AND DETENTION SETTINGS**

Testing, Vaccination, and Treatment for HIV, Viral Hepatitis, TB, and STIs

Recommendations current as of August 10, 2022

Why?

•At least three factors:

- · Those incarcerated are at higher risk for TB
- Physical structure of the facility inadequate ventilation, overcrowding, close living quarters
- · Movement of inmates into and out of facilities

In 2023, 324 (3.6%) persons 15 years of age or older with TB disease were residents of a correctional facility at the time of TB diagnosis.

Tuberculosis among the Homeless

- TB outbreaks frequently originate in homeless shelters – high risk of recurrence
- Homeless person without a fixed, regular adequate nighttime residence within 12 months preceding the diagnosis of TB

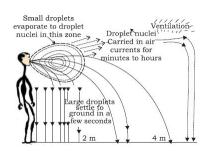

What are environmental factors which increase likelihood of TB transmission?

- Poorly ventilated settings
- Crowding

Crowding and Risk of TB Transmission

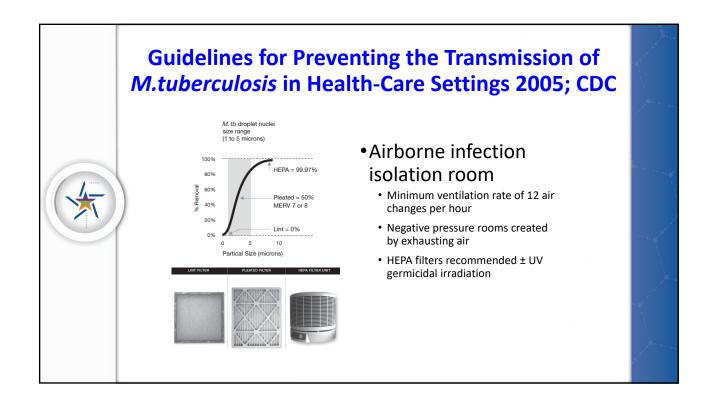

- Increases the likelihood of contact between an infectious TB case and a susceptible person and increases intimacy of exposure
 - PPD conversion in children living in houses of TB cases is associated with the number of cubic ft/person in house
 - Chapman JS. Social and other factors in intrafamilial transmission of tuberculosis. Am Rev Respir Dis 1964
 - The number of new TB cases was highly correlated with overcrowding.
 - Stein L. Glasgow tuberculosis and housing. Tubercle 1954:35; 195-203

Poor Ventilation and Risk of TB Transmission 100 80 · Simplistic parametric model New infections (%) 60 • Depends on other factors 40 such as room volume, occupancy density, infectious 20 dose and susceptibility of host 0 0 12 14 Ventilation rate (AC/h) Figure 5 Effect of ventilation rate on new infections for base condition parameters with a total quanta production rate of 12 quanta/h and an exposure time of 16 h. The transmission of tuberculosis in confined spaces: an analytical review of alternative epidemiological models, Beggs C.B., Int J Tuberc Ling Dis 7(11): 1015-1026, 2003

Why are Healthcare Workers Sick of TB?

 In low- and middle-income countries annual risk of TB infection in HCWs 3.9% to 14.3% (between 2.6% and 11.3% attributable to occupational exposure).

> Joshi R, Reingold AL, Menzies D, Pai M. Tuberculosis among health-care workers in low- and middle-income countries: a systematic review. PLoS Med 2006;3(12):e494.

 Annual risk of developing TB disease was three times higher (95% CI:2.43–3.51) for HCWs compared to the general population.

Baussano I, Nunn P, Williams B, Pivetta E, Bugiani M, Scano F. Tuberculosis among health care workers.
Emerg Infect Dis 2011;17(3):488–94.

Four occupational drug-resistant TB survivors unite behind ZERO TB and ZERO STIGMA on South African National Women's Day.

Healthcare Associated Outbreaks

Disease	Description	Reported quanta per hour	Reported by	Original source
TB	Average TB patient	1.25	Nardell et al. ¹³	Riley et al.15
TB	Outbreak in office building	12.7	Nardell et al. ¹³	Nardell et al. 13
TB	Laryngeal case of TB	60	Nardell et al. ¹³	Riley et al.15
TB	Bronchoscopy-related outbreak	250	Nardell et al. ¹³	Catanzaro ¹⁴
TB	Bronchoscopy-related outbreak	360	Gammaitoni & Nucci ¹¹	Catanzaro ¹⁴
TB	Outbreak related to jet irrigation of abscess	2 280	Gammaitoni & Nucci ¹¹	Hutton et al. 16
TB	Autopsy outbreak	5 400	Gammaitoni & Nucci ¹¹	Kantor et al. 17
TB	Intubation-related outbreak	30 840	Gammaitoni & Nucci ¹¹	Haley et al. 18
Measles	Outbreak in a school (index case)	5 580	Riley et al.9	Riley et al.9

• Extraordinarily high rate of production of droplet nuclei containing *M. tuberculosis* in 'artificial' clinically-induced outbreaks compared to 'normal' pulmonary TB patients

The transmission of tuberculosis in confined spaces: an analytical review of alternative epidemiological models,

Beggs C.B., Int J Tuberc Ling Dis 7(11): 1015-1026

- Few (3%–5%) U.S. HCP test positive for M. tb at baseline
- Low rate of conversion of test to positive (<1%) among U.S. HCP during serial testing (little transmission?)
- Almost half of U.S. HCP reverted from positive to negative test result during serial testing (false positive?)
- No cases of TB disease reported among the ~64,000 U.S. HCP included in studies reviewed (low incidence)

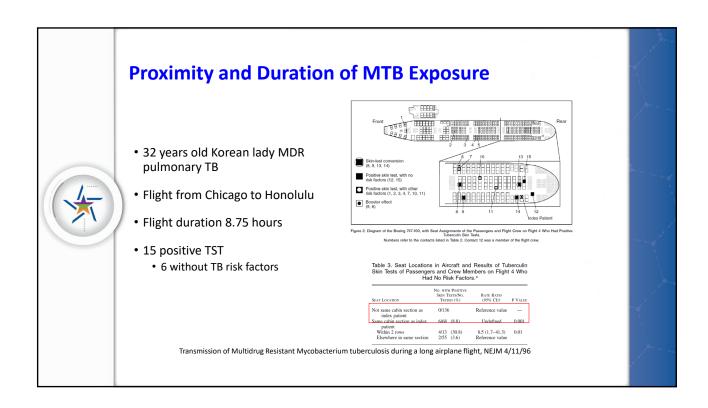

Sosa et al. Tuberculosis Screening, Testing, and Treatment of U.S. Health Care Personnel: Recommendations from the NTCA and CDC, 2019. MMWR Morb Mortal Wkly Rep 2019;68:439–43. https://www.cdc.gov/mmwr/volumes/68/wr/mm6819a3.htm?s_cid=mm6819a3_w

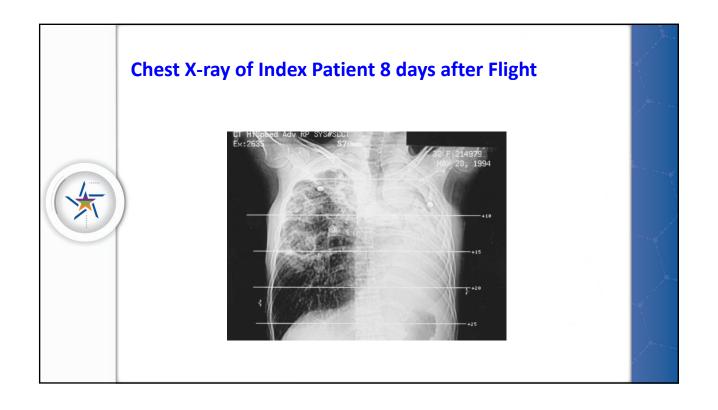

Contacts to persons with infectious TB disease

- Factors include:
 - Infectiousness of TB patient
 - Susceptibility of contact
 - Duration of contact
 - No safe exposure time has been established
 - Proximity of contact
 - Difficult to determine

Contact Investigation for Tuberculosis: a systematic review and meta-analysis; Fox G, Eur Respir J. 2013

Sputum Bacteriology – AFB smear positive

САР	ATS	Interpretation	AFB/ml sputum	Infectiousness of patient	
negative	negative	negative	<5,000	probably not infectious	
1 or 2 per	1 or 2 per	weakly positive	~5,000	probably infectious	
	1+	moderately	~10,000	probably	
<1 per field	2+	positive moderately	~100,000	infectious probably	
1-10 per field	ZT	positive	100,000	infectious	
1-10 per neid	3+	strongly positive	~1,000,000	probably very infectious	
>10 per field	4+	strongly positive	>1,000,000	probably very infectious	

Illicit Drug Use and TB

• IDU often share risk factors which confer additional risk for exposure

Tuberculosis and Illicit Drug Use: Review and Update; Deiss R.G.; CID 2009: 48 Jan 1

- During 2023, reported types of substance use among persons 15 years of age or older with TB disease were:
 - Excess alcohol use (7.9%)
 - Noninjecting drug use (7.8%)
 - Injecting drug use (1.1%)
- 'Shotgunning' inhaling and exhaling smoke into another's mouth – Kansas TB outbreak

A network informed approach to investigating a tuberculosis outbreak: implications for enhancing contact investigations. McElroy RD; Int J Tuberc Lung Dis 2003; 7 S486-93

The Effects of Smoking

- Smoking associated with RR 1.7 for TB Infection and RR 2.3-2.7 for TB disease
- Estimated RR for development. of TB disease in a TB infected population of 1.4-1.6

Risk of Tuberculosis From Exposure to Tobacco Smoke; Bates M.N.; Arch. Int. Med, Feb 2007

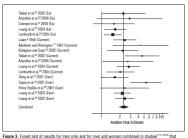

Figure 3. Forest plot of results for men only and for men and women combined in studies. **In samined smoking and tuberculosis disease. The smoking type (ex-smokers [Ex], current smokers Current], and ever smokers [Ever] of the study population is shown on the y-axis.

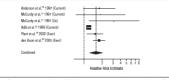

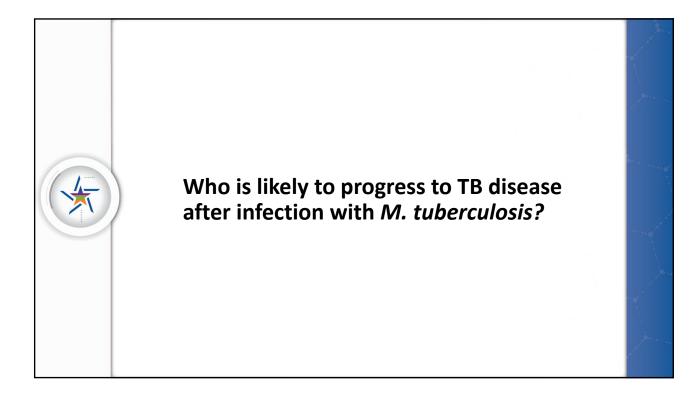

Figure 1. Forest plot of results of 5 studies^{11,438} that examined smoking and tuberculosis infection. smoking type (current smokers [Current], ex-smokers [Ex], and ever smokers [Ever]) of the study population is shown on the y-exis.

Smoking Smoking Smoking Smoking Smoking Smoking Smoking Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Risk Factors Among Persons Aged 215 Years with TB, United States, 2023 Percentage of Social and Behavioral Ri

Risk Factors for Progression to TB disease after infection with *M.tuberculosis*

•Infants and children aged ≤5 years

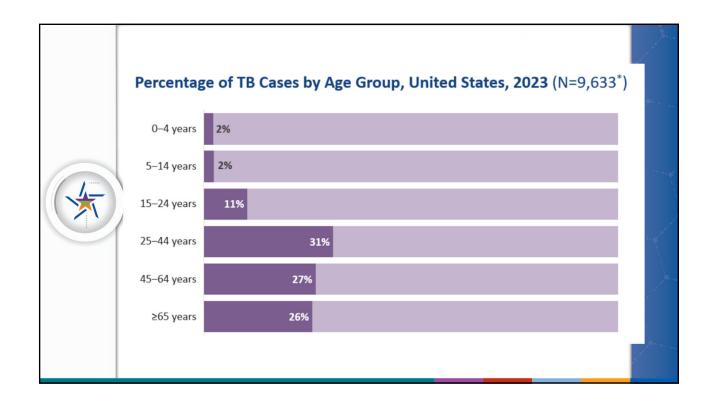

Percent Risk of Disease by Age

Age at Infection	Risk of Active TB	
Birth – 1 year*	43%	
1 – 5 years*	24%	
6 – 10 years*	2%	
11 – 15 years*	16%	
Healthy Adults	5-10% lifetime risk	
HIV Infected Adults+	30-50% lifetime	

*Miller, Tuberculosis in Children Little Brown, Boston, 1963

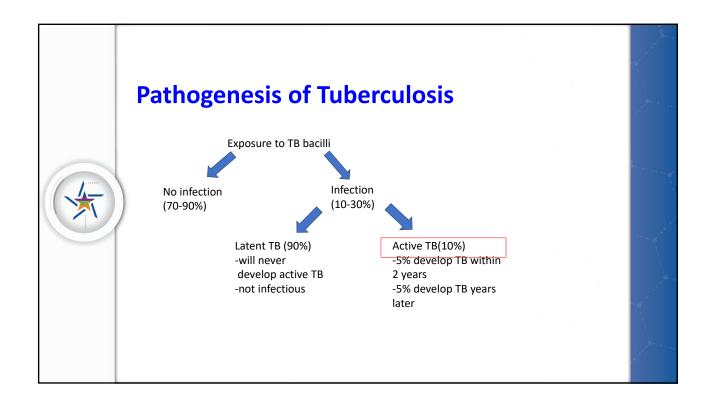

*WHO, 2004

Risk Factors for Progression to TB disease after infection with *M.tuberculosis*

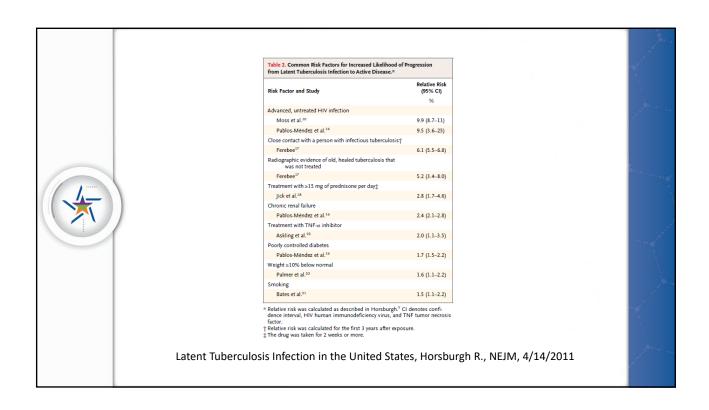

- •Infants and children aged ≤5 years
- •Infected with *M. tuberculosis* within the prior 2 years

Risk Factors for Progression to TB disease after infection with *M.tuberculosis*

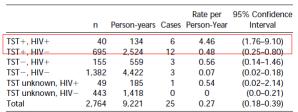

- •Infants and children aged ≤ 5 years
- •Infected with *M.tuberculosis* within the prior 2 years
- •HIV infection and other medical risk factors

Tuberculosis in the Homeless; A Prospective Study Moss, A.; J Respir Crit Care Med Vol 162. pp 460–464, 2000

INCIDENCE OF REPORTABLE TUBERCULOSIS IN THE SAN FRANCISCO GENERAL HOSPITAL HOMELESS COHORT BY HIV AND TUBERCULIN SKIN TEST (TST) STATUS AT BASELINE

HIV infected had about a 10 times higher risk of reactivation than those HIV uninfected

Effect of HIV on Latent TB Reactivation

*HIV infected with 25 times the rate of reactivation of latent TB compared to HIV uninfected

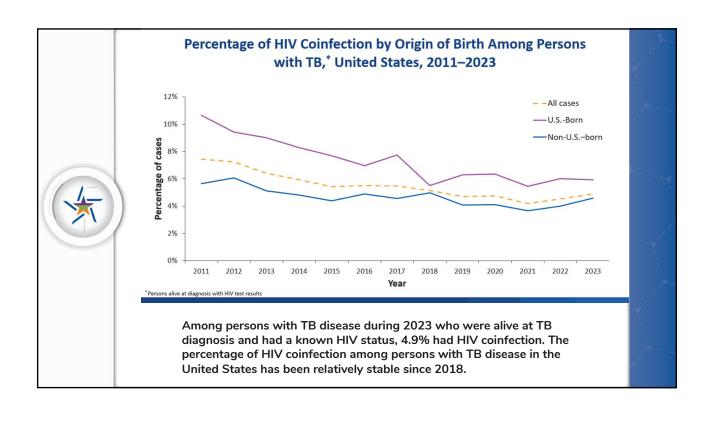

Table 5. Estimated Rate of Reactivation Tuberculosis Among HIV-infected and HIV-uninfected Tuberculosis Patients Aged 15–64 Years Not Residing in California, United States, 2006–2008

	Estimated No. of Reactivation TB Cases	Estimated % of US Population With Latent TB Infection	Estimated US Population	Estimated No. of PY at Risk for Reactivation TB	Estimated Rate of Reactivation TB per 100 PY	95% Confidence Interval
HIV-infected	2,198	4.2	961,000	121,100	1.82	1.74, 1.89
HIV-uninfected	16,568	4.2	182,243,000	22,850,000	0.073	0.070, 0.075

Abbreviations: HIV, human immunodeficiency virus; PY, person-years; TB, tuberculosis.

Estimated rate of reactivation of latent tuberculosis infection in the United States, overall and by population subgroup; Shea KM, Am J Epidemiol. 2014 Jan 15; 179(2):216-25

5.3% of TB patients with known HIV status in 2018 were coinfected with HIV, including 8.6% among persons aged 25--44 years. MMWR 2019

Diabetes and TB

- A link between diabetes and TB has been recognized for centuries
- Diabetics have increased risk of progression to disease, failure of therapy, relapse and mortality from TB

Tuberculosis and diabetes mellitus: convergence of two epidemics; Dooley K; *Lancet Infect Dis.* 2009 December; 9(12): 737–746.
