WHO Classification of Drug Resistant TB

Rifampin Resistant (RR)/MDR (INH and rifampin resistant)

Pre-XDR-TB: TB caused by M. tuberculosis strains that fulfill the definition of MDR/RR-TB and are also resistant to any fluoroquinolone

XDR-TB: TB caused by M. tuberculosis strains that fulfill the definition of MDR/RR-TB and that are also resistant to any fluoroquinolone and at least one additional Group A drug, i.e. bedaquiline or linezolid

Specimen Quality

Accurate laboratory results are directly proportional to the quality of the specimen

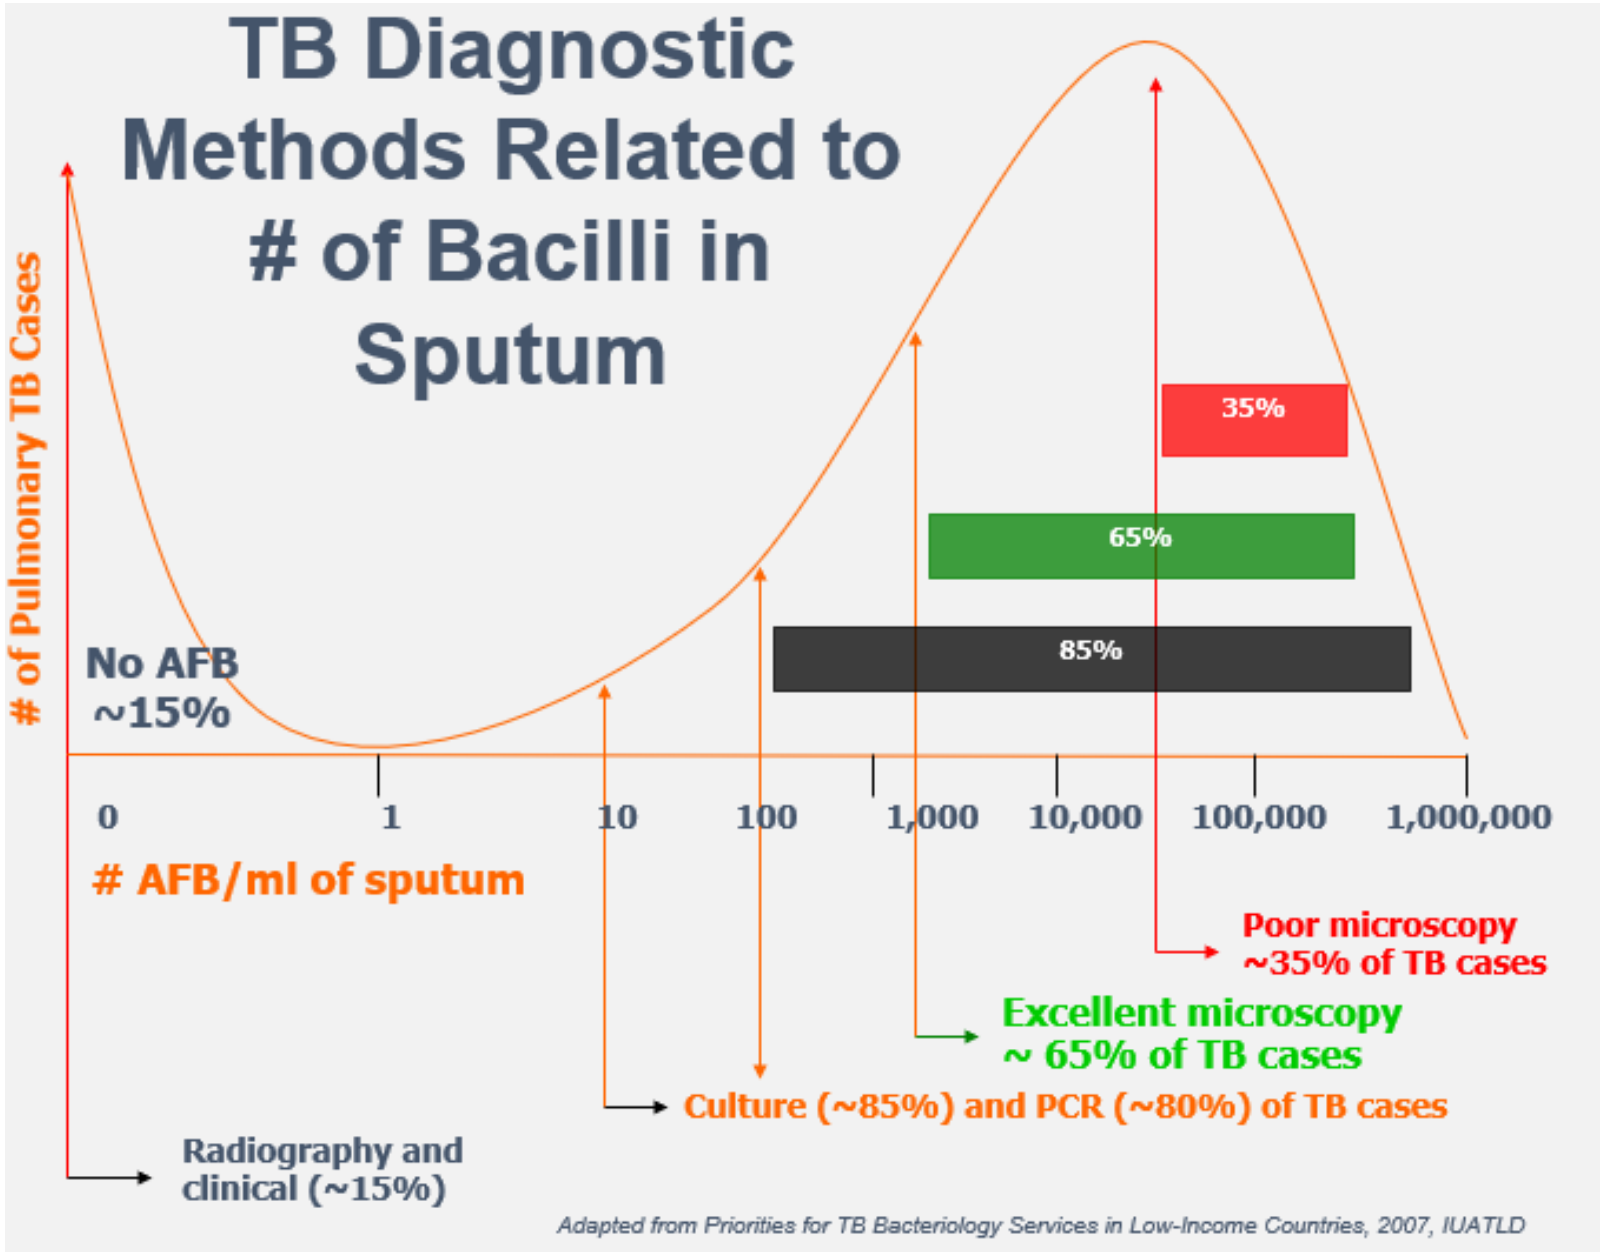
Sputum

- *Recently* discharged material from the bronchial tree, with minimal amounts of upper respiratory tract secretions
  - Well coached patient, collect at least 3ml
  - Label tube, form, and indicate test:
    - Initial Dx: Smear, NAAT, & Culture
    - Follow-up: Smear and Culture

Transport to lab cool and quickly

TEXAS
Health and Human Services
Texas Department of State Health Services

TEXAS
Health and Human Services
Texas Department of State Health Services



Case #1

Typical TB presentation from patient in SE Texas:

- Fever
- Productive cough for a few weeks
- Fatigue
- Loss of appetite

TEXAS
Health and Human Services
Texas Department of State Health Services

Acid Fast Bacilli Microscopy (AFB Smear)

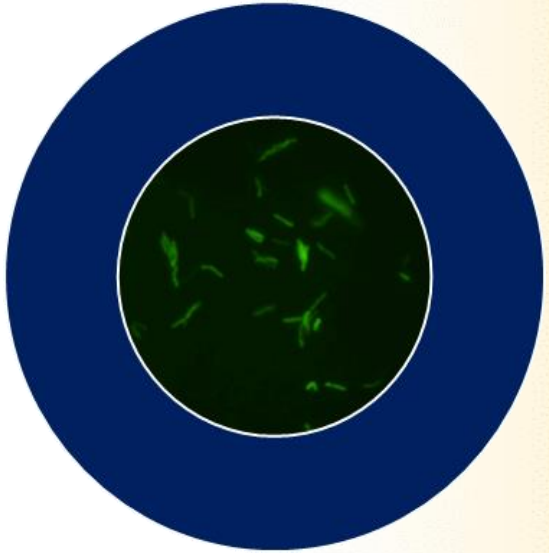
Has many qualities of an ideal diagnostic test

- Rapid & universally available
- Detects the most infectious cases
- Used to support diagnosis and identify need to isolate
- Helps monitor response to therapy
- Identifies priority cases for nucleic acid amplification (NAA)

Problems

- Not sensitive - misses ~50% of TB
- Not specific in low TB prevalence areas (e.g. Texas)
    - Positive smear may be NTM

Highly specific where TB is highly prevalent



TEXAS
Health and Human Services
Texas Department of State Health Services

Smear Result

AFB Smear (Fluorochrome) **POSITIVE:**
AFB seen on direct smear, >10/field

- Strongly positive
- >1,000,000 AFB/ml sputum
- Probably very infectious
- Although, great collection!

TEXAS
Health and Human Services
Texas Department of State Health Services

Nucleic Acid Amplification Tests (NAAT)

Tiny amounts of DNA are amplified (copied) until there is enough for easy detection

- Examined for both Identification and Detection of Drug Resistance

Test turnaround time measured in hours

TEXAS
Health and Human Services
Texas Department of State Health Services

Nucleic Acid Amplification Test (NAAT)

Detects *M. tuberculosis* complex nucleic acids; does not distinguish between live and dead bacilli

- For initial Dx specimens only
- Not suitable for follow-up specimen or monitoring; cured patients may be NAAT + for years!

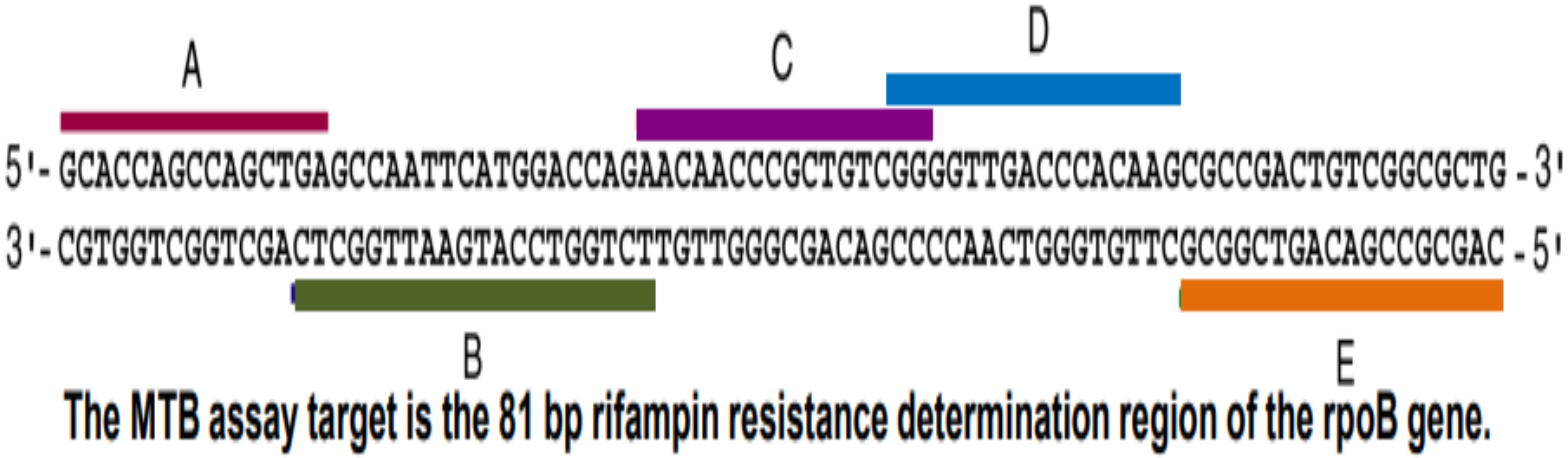
Sensitivity compared to TB culture

- >95% for AFB smear-positive
- Only 55-75% for AFB smear-negative

Does not replace culture for bacteriological Dx

TEXAS
Health and Human Services
Texas Department of State Health Services

Cepheid GeneXpert® Target Region



The MTB assay target is the 81 bp rifampin resistance determination region of the rpoB gene.

Approx. 10% of rifampin resistant predictions are false

(ex. Phe433Phe silent mutation)

GX Rifampin resistant results must be confirmed

NAAT Result

MTB Direct Detection, NAA **POSITIVE: M.tuberculosis complex DNA detected**

Rifampin by Direct NAA **Rifampin resistance mutation not detected; likely rifampin susceptible.**

- Note the wording—”likely” rifampin susceptible
- No mutation detected in the area of the genome probed

TEXAS
Health and Human Services
Texas Department of State Health Services

AFB Culture

More sensitive than smear

- 5,000 to 10,000 AFB/ml for smear
- ~10 viable AFB/ml for culture

Positive for only ~85% of Pulmonary TB

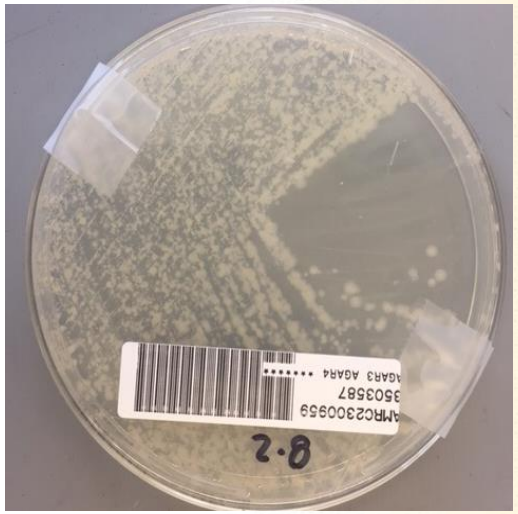
- Requires a quality specimen
- May be invalid due to contamination

Used to monitor patient response to treatment (like smear)

Required for conventional drug susceptibilities & genotype (WGS)

Lengthy

- 1-6 weeks by liquid media
- 2-8 weeks by solid media



TEXAS
Health and Human Services
Texas Department of State Health Services

Culture Result

Organism ID by HPLC **Mycobacterium tuberculosis complex**

- High Performance Liquid Chromatography is the primary means of organism identification at this time
- HPLC is performed on *culture*

TEXAS
Health and Human Services
Texas Department of State Health Services

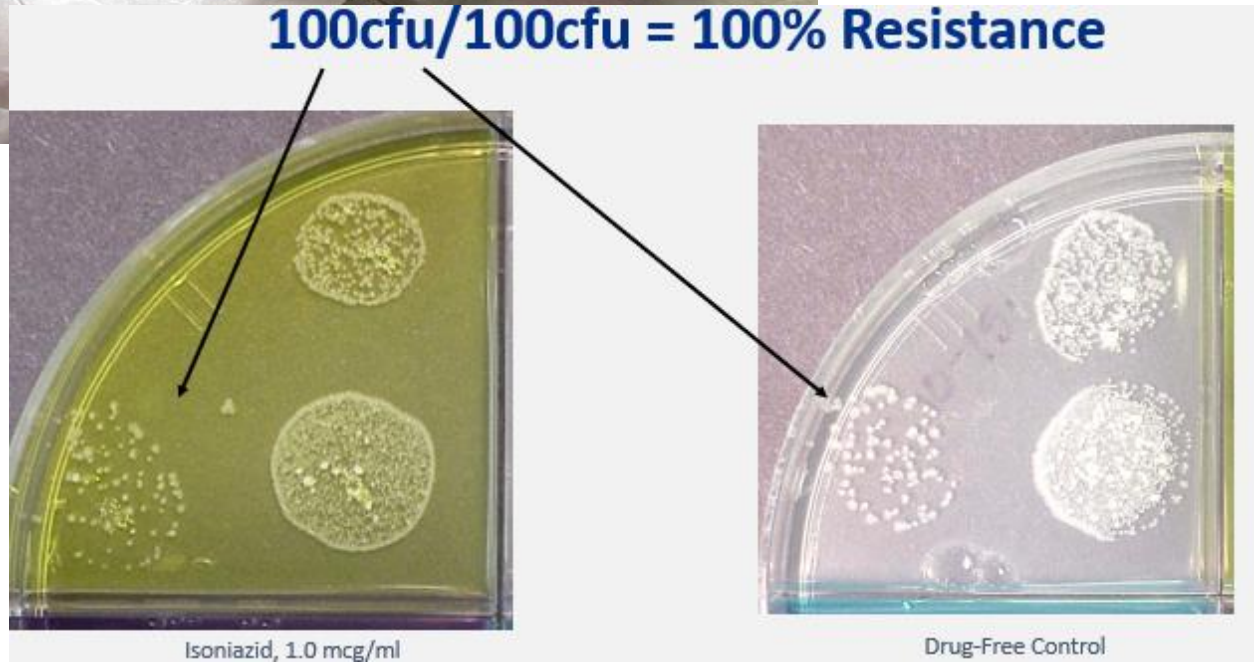
Conventional Drug Susceptibility Testing (DST) by Agar Proportion

A standardized suspension of M. tuberculosis is inoculated to quadrant plates of drug-containing Middlebrook 7H10 agar and a drug-free control.

If growth of M. tuberculosis on the drug quadrant is 1% or greater than the growth on the control, the drug can no longer be counted on as being effective for treatment.

TEXAS
Health and Human Services
Texas Department of State Health Services

TEXAS
Health and Human Services
Texas Department of State Health Services



Conventional DST Result

Isoniazid 0.2 mcg/ml by Agar Proportion **Resistant**

Rifampin 1.0 mcg/ml by Agar Proportion Susceptible

Ethambutol 5.0 mcg/ml by Agar Proportion Susceptible

Isoniazid 1.0 mcg/ml by Agar Proportion Susceptible

Ofloxacin 2.0 mcg/ml by Agar Proportion Susceptible

TEXAS
Health and Human Services

Texas Department of State Health Services

Genotyping by Whole Genome Sequencing (WGS)

2,690 genetic loci examined and compared

Those that are 99.7% similar clustered by wgMLSType

This translates as <8 SNPs difference to at least one isolate in cluster

Phylogenic trees can be created within clusters

Not indicative of drug resistance pattern!

TEXAS
Health and Human Services

Texas Department of State Health Services

Genotyping Result

Date of Specimen Collection	Submitter Number	State Case Number	Date Received	wgMLSType

TEXAS
Health and Human Services
Texas Department of State Health Services

Case #2

Patient is high risk for drug resistance due to contacts and place of birth (Mexico)

Submitted by local health department on the border

NAAT requested

- Will perform GeneXpert on request regardless of smear result
- One negative smear NAAT per patient per 2 months

TEXAS
Health and Human Services
Texas Department of State Health Services

Smear and NAAT Results

AFB Smear (Fluorochrome) **NEGATIVE: No AFB seen on direct smear**

- Low burden or poor collection

MTB Direct Detection, NAA **POSITIVE: M.tuberculosis complex DNA detected**

Rifampin by Direct NAA **Rifampin resistance mutation detected; likely rifampin Resistant; confirmatory testing in progress.**

- Due to limited amount of DNA will need to wait for better candidate or culture for further testing

TEXAS
Health and Human Services
Texas Department of State Health Services

Culture Result

Organism ID by HPLC **Mycobacterium tuberculosis complex**

- Patient's only NAAT positive, culture positive specimen
- Suggests low-burden TB
- 2½ weeks from Xpert result to culture

TEXAS
Health and Human Services
Texas Department of State Health Services

Molecular Detection of Drug Resistance (MDDR)

Can provide rapid detection of drug resistance

Both NAAT positive and culture positive specimens are candidates

Particularly useful for high-risk patients, RMP positive Xpert sediment, contaminated specimens, or those specimens that do not grow well or are non-viable in standard TB media

Examines 24 amplicons across 16 genes providing information on more than 12 antituberculosis drugs

TEXAS
Health and Human Services
Texas Department of State Health Services

MDDR Report

Rifampin (RIF)	Result	Interpretation
RIF interpretation		RIF resistant
rpoB*	Ser450Trp	

Comments and Disclaimers

* DTBE Reference Laboratory has transitioned from the E. coli to the M. tuberculosis numbering system for reporting rpoB gene mutations.

Isoniazid (INH)	Result	Interpretation
INH interpretation		INH resistant
inhA	No mutation	
fabG1	No mutation	
katG	Ser315Thr	

Ethambutol (EMB)	Result	Interpretation
EMB interpretation		Likely EMB resistant
embB	Asp354Ala	

Pyrazinamide (PZA)	Result	Interpretation
PZA interpretation		Cannot rule out PZA resistance.
pncA	No mutation	

Fluoroquinolones (FQ)	Result	Interpretation
FQ interpretation		Cannot rule out FQ resistance.
gyrA	No mutation	
gyrB	No mutation	

Amikacin, Capreomycin, and Kanamycin (AMK, CAP, and KAN)	Result	Interpretation
AMK CAP and KAN interpretation		Cannot rule out resistance to AMK, CAP, and KAN.
rrs	No mutation	
eis	No mutation	

Bedaquiline (BDQ)	Result	Interpretation
BDQ interpretation		Cannot rule out BDQ resistance.
atpE	No mutation	
rv0678	No mutation	
pepQ	No mutation	

Clofazimine (CFZ)	Result	Interpretation
CFZ interpretation		Cannot rule out CFZ resistance.
pepQ	No mutation	
rv0678	No mutation	

Linezolid (LZD)	Result	Interpretation
LZD interpretation		Cannot rule out LZD resistance.
rplC	No mutation	
rrl	No mutation	

Conventional DST Result (DSHS)

Isoniazid 0.2 mcg/ml by Agar Proportion **Resistant**

Rifampin 1.0 mcg/ml by Agar Proportion **Resistant**

Ethambutol 5.0 mcg/ml by Agar Proportion **Resistant**

Isoniazid 1.0 mcg/ml by Agar Proportion **Resistant**

Ethionamide 5.0 mcg/ml by Agar Proportion Susceptible

Streptomycin 2.0 mcg/ml by Agar Proportion Susceptible

Ofloxacin 2.0 mcg/ml by Agar Proportion Susceptible

Rifabutin 2.0 mcg/ml by Agar Proportion **Resistant**

Kanamycin 5.0 mcg/ml by Agar Proportion Susceptible

Capreomycin 10.0 mcg/ml by Agar Proportion Susceptible

TEXAS
Health and Human Services

Texas Department of State Health Services

Conventional DST Result (CDC)

MTBC Agar Proportion Susceptibility*	% Resistant	Interpretation
Isoniazid 0.2 µg/mL	100 %	Resistant
Isoniazid 1.0 µg/mL	100 %	Resistant
Isoniazid 5.0 µg/mL	67 %	Resistant
Rifampin 1.0 µg/mL	100 %	Resistant
Ethambutol 5.0 µg/mL	67 %	Resistant
Streptomycin 2.0 µg/mL	0 %	Susceptible
Streptomycin 10.0 µg/mL	0 %	Susceptible
Rifabutin 2.0 µg/mL	67 %	Resistant
Ciprofloxacin 2.0 µg/mL	0 %	Susceptible
Kanamycin 5.0 µg/mL	0 %	Susceptible
Ethionamide 10.0 µg/mL	0 %	Susceptible
Capreomycin 10.0 µg/mL	0 %	Susceptible
PAS 2.0 µg/mL	0 %	Susceptible
Ofloxacin 2.0 µg/mL	0 %	Susceptible
Amikacin 4.0 µg/mL	0 %	Susceptible

Comments and Disclaimers

* Susceptibility testing method: Indirect agar proportion, 7H10 medium. Resistance is defined as >1% (growth on drug-containing medium compared to drug-free medium).
This test has not been cleared or approved by the FDA. The performance characteristics have been established by the DTBE Reference Laboratory.

MTBC Pyrazinamide Susceptibility*	Result
Pyrazinamide 100 µg/mL†	Not Tested

Comments and Disclaimers

† Test not done
This test order is unavailable until further notice.
* Susceptibility testing method: Mycobacteria Growth Indicator Tube (MGIT)

TEXAS
Health and Human Services

Texas Department of State Health Services

WGS (pipeline)

Used primarily for molecular DST to first-line antibiotics

Currently only available means for PZA testing

Can detect low-level rifampin resistance that may not have been recognized by growth-based susceptibilities

Can detect variants with mutation associated with *M. bovis* or *bovis* BCG

- *pncA* His57Asp

TEXAS
Health and Human Services
Texas Department of State Health Services

WGS Result (DSHS)

Interpretations Summary:

Drug	Variant	Interpretation
INH	katG_p.Ser315Thr	INH-R
RIF	rpoB_p.Ser450Trp	RIF-R
PZA	No reportable variant detected	PZA-S
FQ	No reportable variant detected	FQ-S
EMB	embB_p.Asp354Ala	EMB-R

TEXAS

TEXAS
Health and Human Services

Texas Department of State Health Services

Case #4

Father of son and daughter with pre-XDR TB five years prior

Refused evaluation then

Now symptomatic

TEXAS
Health and Human Services
Texas Department of State Health Services

Smear and NAAT Results

AFB Smear (Fluorochrome) **POSITIVE: AFB seen on direct smear, >10/field**

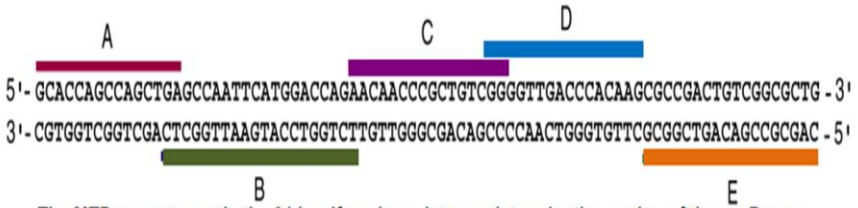
MTB Direct Detection, NAA **POSITIVE: M.tuberculosis complex DNA detected**

Rifampin by Direct NAA **Rifampin resistance mutation not detected; likely rifampin susceptible.**

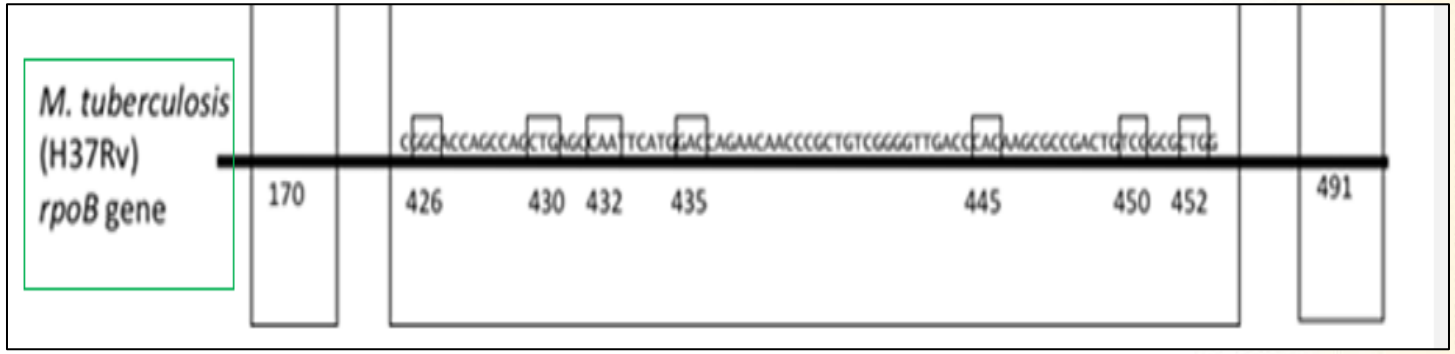
- Although rifampin susceptible by Xpert, patient still high risk and urgency to develop drug regimen

TEXAS
Health and Human Services
Texas Department of State Health Services

Xpert vs MDDR *rpoB* Evaluation



The MTB assay target is the 81 bp rifampin resistance determination region of the rpoB gene.



MDDR sequences 2 codons outside of RRDR known to be associated with rifampin resistance

MDDR can detect as low as 10% rifampin resistant population while Xpert limit of detection is 30%

MDDR Report

Rifampin (RIF)	Result	Interpretation
RIF interpretation		Low-level RIF resistance; May test susceptible by phenotypic method.
rpoB*	Ile491Phe	

Comments and Disclaimers

* DTBE Reference Laboratory has transitioned from the E. coli to the M. tuberculosis numbering system for reporting rpoB gene mutations.

Isoniazid (INH)	Result	Interpretation
INH interpretation		INH resistant
inhA	No mutation	
fabG1	No mutation	
katG	Ser315Thr	

Ethambutol (EMB)	Result	Interpretation
EMB interpretation		Likely EMB resistant
embB	Asp354Ala	

Pyrazinamide (PZA)	Result	Interpretation
PZA interpretation		Cannot rule out PZA resistance.
pncA	No mutation	

Fluoroquinolones (FQ)	Result	Interpretation
FQ interpretation		FQ resistant
gyrA	Ser91Pro	
gyrB	No mutation	

Amikacin, Capreomycin, and Kanamycin (AMK, CAP, and KAN)	Result	Interpretation
AMK CAP and KAN interpretation		Cannot rule out resistance to AMK, CAP, and KAN.
rrs	No mutation	
eis	No mutation	

Bedaquiline (BDQ)	Result	Interpretation
BDQ interpretation		Cannot rule out BDQ resistance.
atpE	No mutation	
rv0678	No mutation	
pepQ	No mutation	

Clofazimine (CFZ)	Result	Interpretation
CFZ interpretation		Cannot rule out CFZ resistance.
pepQ	No mutation	
rv0678	No mutation	

Linezolid (LZD)	Result	Interpretation
LZD interpretation		Cannot rule out LZD resistance.
rplC	No mutation	
rrl	No mutation	

Conventional DST Results

Both DSHS and CDC agar proportion results were consistent with the molecular findings

- DSHS found isolate to be 10% resistant to rifampin
- CDC found 8% resistance

TEXAS
Health and Human Services
Texas Department of State Health Services

Minimum Inhibitory Concentration (MIC) Testing

Lowest concentration of a drug which prevents detectable growth in vitro when tested in a series of concentrations

Only available at specialized laboratories such as CAHD and Wadsworth Center NYHD

Performed only by special request on select antibiotics

Can be tested by MGIT, AP, or Broth Micro-dilution (BMD)

TEXAS
Health and Human Services
Texas Department of State Health Services

MIC Result

California Health Department performed, **moxifloxacin MIC=1.0 ug/ml**

- Intermediate resistance can be overcome with higher dose

TEXAS

Case #5

Patient is a 71 y/o male from Mexico visiting family in Texas including a 2 y/o

Non-productive cough

Fatigue

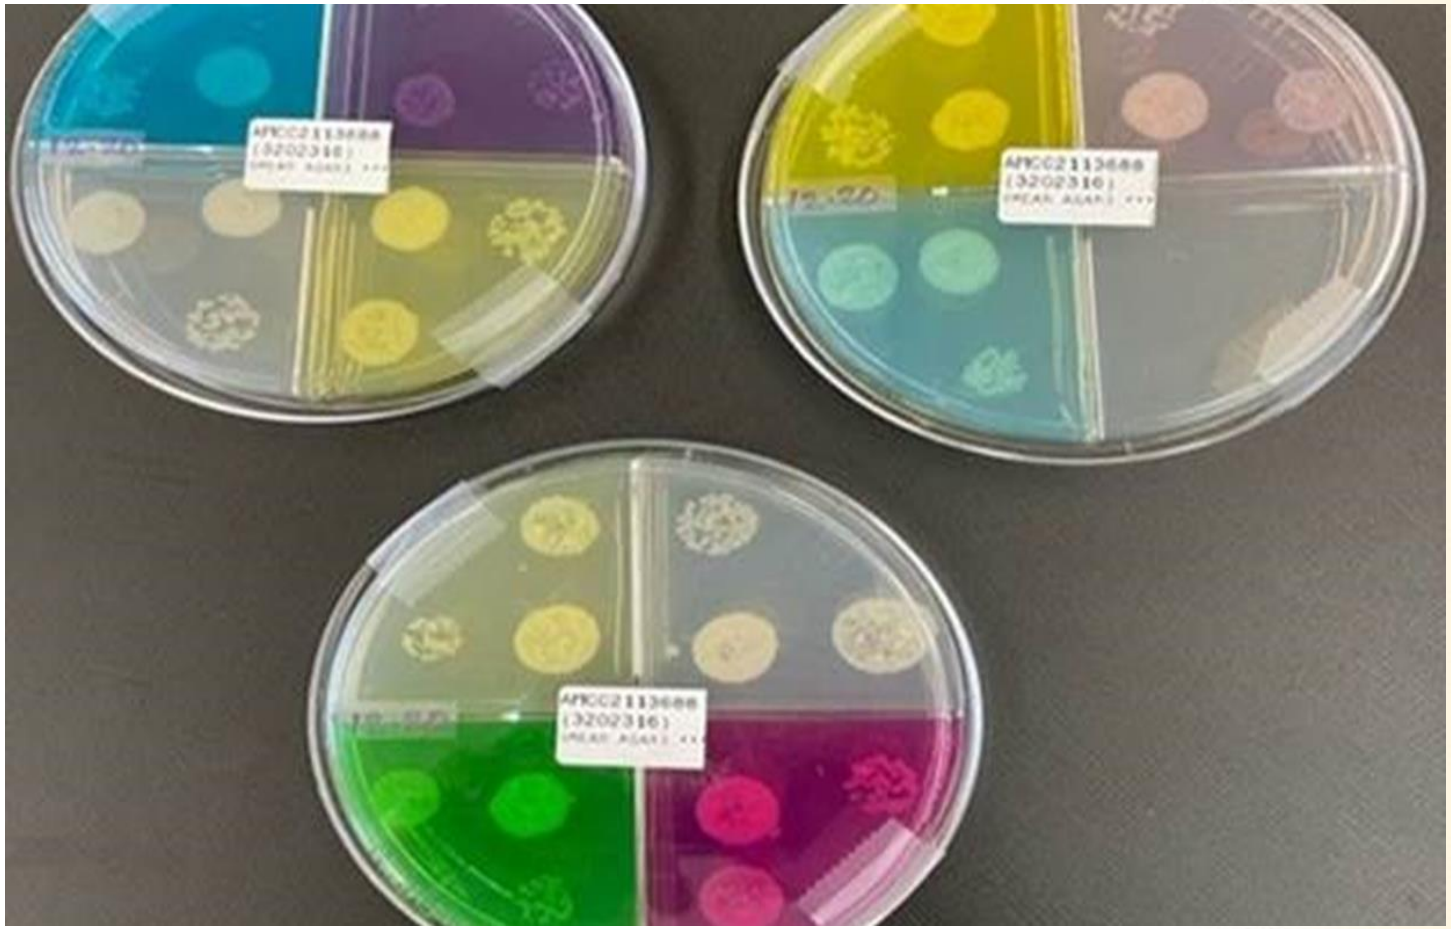
Weight loss for a year

Xpert positive for rifampin resistance

TEXAS
Health and Human Services

Texas Department of State Health Services

Conventional DST Result



TEXAS
Health and Human Services

Texas Department of State Health Services

Case #6

Eighty y/o male visiting from Mexico

Poor health

Rifampin resistant by Xpert

TEXAS
Health and Human Services
Texas Department of State Health Services

MDDR Report

Rifampin (RIF)	Result	Interpretation
RIF interpretation		RIF resistant
rpoB*	His445Tyr	

Comments and Disclaimers

* DTBE Reference Laboratory has transitioned from the E. coli to the M. tuberculosis numbering system for reporting rpoB gene mutations.

Isoniazid (INH)	Result	Interpretation
INH interpretation		INH resistant
inhA	No mutation	
fabG1	No mutation	
katG	Ser315Thr	

Ethambutol (EMB)	Result	Interpretation
EMB interpretation		Effect of mutation unknown. Cannot rule out EMB resistance.
embB	Trp290Cys	

Pyrazinamide (PZA)	Result	Interpretation
PZA interpretation		Effect of mutation unknown. Cannot rule out PZA resistance.
pncA	Ile6frameshift	

Fluoroquinolones (FQ)	Result	Interpretation
FQ interpretation		Cannot rule out FQ resistance.
gyrA	No mutation	
gyrB	No mutation	

Amikacin, Capreomycin, and Kanamycin (AMK, CAP, and KAN)	Result	Interpretation
AMK CAP and KAN interpretation		Cannot rule out resistance to AMK, CAP, and KAN.
rrs	No mutation	
eis	No mutation	

Bedaquiline (BDQ)	Result	Interpretation
BDQ interpretation		Effect of mutation unknown. Cannot rule out BDQ resistance.
atpE	No mutation	
rv0678	Asp15Glu	
pepQ	No mutation	

Clofazimine (CFZ)	Result	Interpretation
CFZ interpretation		Effect of mutation unknown. Cannot rule out CFZ resistance.
pepQ	No mutation	
rv0678	Asp15Glu	

Linezolid (LZD)	Result	Interpretation
LZD interpretation		Effect of mutation unknown. Cannot rule out LZD resistance.
rplC	No mutation	
rrl	C2070A, C2130A	

TEXAS
Health and Human Services

Texas Department of State Health Services

Conventional DST Result (Wadsworth Center NYHD)

BPaL Susceptibility testing for M. tuberculosis complex (MGIT)

Bedaquiline [1.0 ug/ml]: **Susceptible**

Clofazimine [1.0 ug/ml]: **Susceptible**

Linezolid [1.0 ug/ml]: **Susceptible**

Very scary situation.

TEXAS
Health and Human Services
Texas Department of State Health Services

Summary

Each of these testing methods have individual benefits and disadvantages

Understanding these characteristics can reconcile seeming discordance

Integrating these methods provides a clearer understanding of patient's situation and a path to appropriate treatment especially with the rise of resistant and complex cases

If unsure how to interpret results, ask!

TEXAS
Health and Human Services
Texas Department of State Health Services

Thank You!
