TARGET AUDIENCE

This course is intended for the nurse case manager with more than three years of experience and greater than 50% of their time devoted to working in TB. This is **not** an introductory course. Upon registration, participants with less than three years of experience must have attended the *LEVEL 2: Essentials of TB Nurse Case Management Online* course within the last two years prior to attending this *TB Nurse Case Management* course.

COURSE GOAL

The goal of this course is to provide an in-depth training experience covering the knowledge and skills essential for the nurse with primary responsibility for TB case management. The workshop will go beyond the basic TB curriculum and enhance the participant's ability to be accountable for all facets of case management.

COURSE OBJECTIVES

At the completion of this training participants will be able to 1) describe current recommendations and updates in the treatment of TB disease and LTBI, 2) identify at least two lab related technologies to assist in the treatment and control of TB, 3) identify at least two diagnostic related technologies to assist in the treatment and prevention of TB, 4) discuss three nursing strategies in managing and monitoring patients throughout TB treatment, 5) discuss social considerations within management of patients with TB, and 6) use case studies to examine challenges with TB treatment and treatment completion.

COURSE FORMAT

The format for this course will be lecture-style presentations with interactive exercises and case study analysis with audience discussion and participation.
